EDUCATION

- **Bachelor of Technology**, Indian Institute of Information Technology Kalyani (CGPA: 7.54) 2022 – Present

TECHNICAL SKILLS

- **Operations & Workflow:** Designed and optimized workflows, managed event operations, ensured efficient data handling, and coordinated tasks to improve execution efficiency
- **Programming Languages:** C, Python, Assembly Language (ASM), Shell Script, JavaScript, HTML, CSS
- **Technologies and Tools:** PyTorch, Scikit-Learn, TensorFlow, Keras, Pandas, NumPy, Express.js, OpenCV, FastAPI, Matplotlib, OS Module, Machine Learning, LangChain, LangGraph
- **Other Skills:** AWS, Docker, Distributed Systems, Databases (SQL/NoSQL), Linux, Windows, Matlab, Git/GitHub, Postman, Collaboration Tools

LEADERSHIP & SKILLS

- **Coordinated and streamlined** recruitment processes as Placement Coordinator by **collaborating** with industry partners and HRs and **organizing** placement activities for the batch, ensuring efficient candidate-employer workflows. Feb 2025 – Jun 2025
- **Student Coordinator**, Gymkhana (Student Body), Indian Institute of Information Technology Kalyani – Facilitated communication between students and administrative authorities, addressing and resolving a range of student concerns Aug 2024 – Aug 2025
- **Organized a hands-on Machine Learning workshop** for 50+ students , guiding participants in building a House Price Prediction model from scratch Dec 2025
- **Coordinator, Status Code 1 Hackathon** – Facilitated coordination between various student organizations and participants, ensuring smooth execution and efficient process management Aug 2024 – Oct 2024
- **Lead a team** to secure **first place** in the internal round of **Smart India Hackathon** by designing and presenting a Disaster Management System addressing real-world challenges Oct 2024

WORK EXPERIENCE

ML Engineer(Intern) Mar 2025 – Jun 2025
Day and Night Space Foundation – Remote

- **Analyzed and processed** large datasets to extract meaningful insights and improve prediction quality.
- Applied feature selection techniques to **reduce dimensionality** and enhance model efficiency.
- Visualized trends and model performance using **Matplotlib** to support decision-making.
- Improved model generalization by **tuning hyperparameters** using Random Search.

PROJECTS

- **Brain Tumor Detection(tensorflow, keras, flask) :**
 - **Developed, evaluated, and validated** a hybrid ensemble model which was combination of Xception and PDCNN model
 - **Accuracy** Achieved 94.81% of accuracy and 92.36% of F1 score
 - **Deployed** a Flask-based web interface; **instrumented** usage analytics to **quantify** model performance and facilitate feedback from healthcare users.
- **Breast cancer classification (pytorch, scikit-learn):**
 - **Developed** a **Deep Learning-based Histopathology Classifier** using **PyTorch** and the **ConvNeXt** architecture to detect Invasive Ductal Carcinoma (IDC) with **90% Accuracy** and **0.95 AUC**.
 - **Engineered** a robust preprocessing pipeline using **Elastic Transformations** and **Stochastic Depth** regularization to handle high intra-class variance in medical imaging.
 - **Optimized** model performance using **Transfer Learning** and **Test-Time Augmentation (TTA)**, reducing false positives while maintaining high sensitivity on an imbalanced dataset of 277k+ patches.
- **CRUD Application**
 - **Created** a moderately complex mysql based data structure with multiple entities and relations
 - **Normalization** Implemented advanced **normalization (up to 4NF)**, eliminating redundancy and ensuring data integrity.
